

# Czech Republic

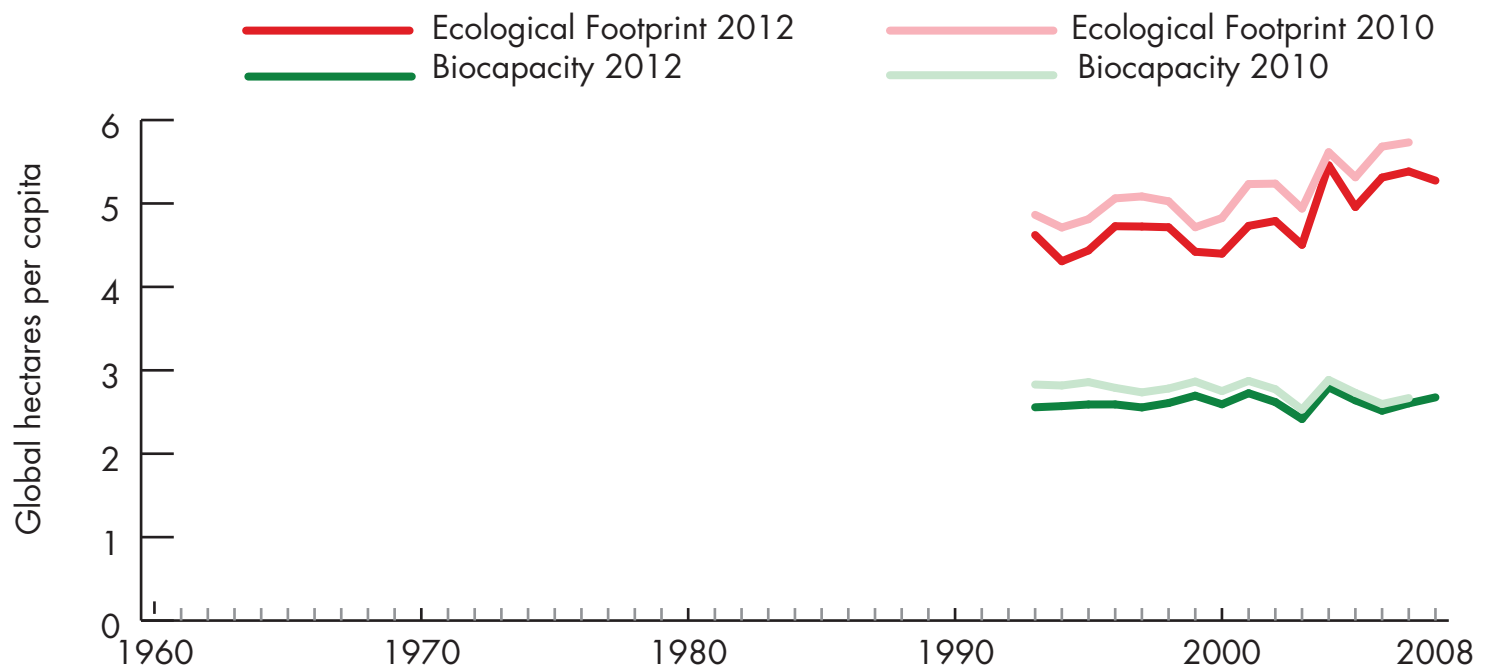

The aim of this factsheet is to give an overview of the Ecological Footprint and biocapacity within each country to give both some facts and figures and to help to explain why the results and country rankings in the LPR 2012 may be different from LPR 2010.

If everyone in the world consumed like Czech Republic then the Ecological Footprint would be 2.97 Planets.

## Comparing LPR 2010 and LPR 2012

	LPR 2010	LPR 2012
Ecological Footprint per person	5.73	5.27
Ecological Footprint ranking	14	18
Biocapacity per person	2.67	2.68
Biocapacity ranking	45	46

## Trends in the Ecological Footprint and biocapacity in 2010 and 2012

## Why are there differences in LPR 2010 compared to LPR 2012?

	Per capita gha	Percentage change	Explanation
<b>Total Ecological Footprint:</b>	5.27	-8%	
Carbon:*	2.89	-11%	Source data revision;
Grassland:	0.19	28%	Template improvement;
Cropland:	1.17	8%	
Fishing grounds:	0.02	-61%	Template improvement;
Forests:	0.83	-18%	Source data change;
Built-up land:	0.17	3%	
	Per capita gha	Percentage change	Explanation
<b>Total biocapacity:</b>	2.68	0%	
Grassland:	0.12	1	
Cropland:	1.17	2%	
Fishing grounds:	0.00	-1%	
Forests:	1.21	-2%	
Built-up land:	0.17	3%	

\* All countries carbon Footprint decreased 27 percent due to a revision in oceanic carbon sequestration
