Dear Friend,

**Earth Overshoot Day 2019 lands on July 29.** This is the day when humanity has used nature's budget for the entire year, according to our latest [data](#).

We're excited to announce that the two **winning entries** of this year's **Guess-the-Date Contest** are both from the United States. Watch their video and check out their winning calculation methods [here](#).

In 2019, [Earth Overshoot Day](#) is the earliest ever. This means that humanity is now using nature 1.75 times as fast as the planet's ecosystems can

## #MoveTheDate towards one-planet prosperity

The good news is, we *can* reverse the trend. **If we move Earth Overshoot Day by five days every year, we'll use less than 1 Earth before 2050. Solutions are readily available. [We invite you to take steps](#) to #MoveTheDate from the **energy, food, cities, population, and planet** levers.** Opportunities for action include starting a population conversation, launching workplace programs such as food waste reduction, and petitioning governments to manage natural resources responsibly.

We, at Global Footprint Network, believe that it is possible to #MoveTheDate. And it requires each one of us being actively involved. Together, let's grow the movement.

Looking forward to being in action with you to #MoveTheDate!

Warm regards,

Amanda, Laetitia, Mathis, and the rest of the Earth Overshoot Day Team
